

Reduce Hard-dollar Expenses. Increase the Bottom Line Now. Let Us Worry About The Problems!

How to make your IT staff more efficient...for less money than you now spend!

- ✓ Focus them on user productivity issues and not managing a database.

How to Save Thousands of Dollars in hard cash expenses!

- ✓ AVOID investment in hardware and software that requires continuous monitoring, repair, and eventual replacement.

Mark Systems Inc (MSI) is pleased to announce the MSI SaaS (Software as a Service) solution. This service is where MSI will host the Agilis Application and SQL server functions on our servers.

Software as a service (SaaS, typically pronounced 'Sass') is a model of software deployment where an application is hosted as a service provided to customers across the Internet. By eliminating the need to install and run Agilis and SQL Server on your computer and servers, SaaS alleviates your burden of hardware maintenance, ongoing operation, and support. It will also reduce investment on server hardware.

The service includes off site backups, optional CDP (Continual Data Protection), redundant servers and redundant fiber internet connections. The servers are in a server farm with automatic load balancing to keep everything running as fast as we can. The computer room has its own A/C and UPS. It also includes all of the licenses for SQL Server, Terminal Server, and Windows Server. The servers are monitored 24x365 to make sure we provide maximum uptime.

MSI SaaS is the way of the future. Microsoft® has already jumped on the SaaS program and is offering major support to companies like MSI. Why continue to deal with servers and client applications when MSI can do it all for you?

System Hardware & Licensing	MSI SaaS	Customer-Hosted Server
Mid Range Dell Server-RAID 5	Included	\$4,500
Windows 2008 OS – 10 User Lic	Included	\$1,400
